

At col. 3, line 59 of the cut-up specification, correct the spelling of "flexographic". The specification at col. 3, lines 53-59 now reads:

B¹

A like situation occurs with the printing of slurry-type materials such as "scratch-n-sniff" materials which is a liquid vehicle containing an encapsulated essence. Such liquid vehicles, because of the nature of the slurry, must be printed with a flexographic process because the anilox roller can supply greater amounts of ink to the [flexo] flexographic plate on the plate cylinder.

At col. 4, line 47, delete "image".

At col. 4, line 49, insert after "the" the following: -- receptive surface of the copy web or succession of copy sheets on the - .

At col. 4, line 51, correct the spelling of each of "may".

The specification at col. 4, lines 46-51 now reads:

Whenever a station is used for flexographic printing a flexographic plate [image] is placed on the blanket cylinder for receiving the liquid vehicle and transferring the liquid vehicle to the receptive surface of the copy web or succession of copy sheets on the impression cylinder for printing. Anilox roller is associated with the flexographic plate for supplying the liquid vehicle which [nay] may be an aqueous based vehicle

In the Claims

Please amend original patent '363 claims 12, 19-20 and 22, and further amend claims 44-45, 49, 53, 55, 57-58, 60, 62-63, 65, 72, 78, 82, and 86-87 first presented in this reissue as follows:

- (already done by N.E.)
12. (Amended) Apparatus for creating a combined lithographic/flexographic printing process comprising:
- a substrate;
 - a plurality of successive printing stations for printing color images on the substrate in a continuous in-line process;
 - at least two successive ones of said printing stations being flexography stations and comprising:
- (1) a supply of liquid coating;
